

IN THE CLAIMS

1. [cancelled]

2. [currently amended] ~~An arrangement~~ A firewall device according to claim ~~11~~ 4, wherein,

said full management user interface comprises management operations for setting initial configuration of the network security application and for updating or modifying configuration of the network security application, and

said limited management user interface comprises management operations for updating or modifying configuration of the network security application.

3. [currently amended] ~~An arrangement~~ A firewall device according to claim ~~11~~ 4, wherein,

the network security application comprises mechanisms for sending to the limited management user interface an alarm as a response to a predefined situation, and

said limited management user interface comprises management operations for acknowledging receipt of an alarm.

4. [currently amended] ~~An arrangement~~ A firewall device according to claim ~~11~~ 4, wherein,

the network security application comprises memory and mechanisms for storing log data into the memory,

said full management user interface comprises management operations for viewing said log data, and

said limited management user interface comprises management operations for viewing limited amounts of said log data.

5. [currently amended] ~~An arrangement~~ A firewall device according to claim 11 4, wherein said wireless remote connection uses wireless application protocol (WAP).

6. [currently amended] ~~An arrangement~~ A firewall device according to claim 11 4, wherein said wireless remote connection uses short message service (SMS) messages.

7. [currently amended] ~~An arrangement~~ A firewall device according to claim 11 4, wherein said wireless remote connection uses HyperText Transfer Protocol (HTTP).

8. [currently amended] ~~An arrangement~~ A firewall device according to claim 11 4, wherein,

the limited management user interface resides in a wireless device and the network security application comprises mechanisms for authenticating said wireless device and mechanisms for authenticating the person using said wireless device in the messages received from the limited management user interface to the network security application.

9. [currently amended] ~~An arrangement~~ A firewall device according to claim 11.4, wherein,

said full management user interface comprises management operations for configuring said limited management user interface.

10. [cancelled]

11. [currently amended] A firewall device, comprising

a network security application,

a full management user interface which comprises mechanisms for conducting management operations for the network security application over a secure data connection, and

a wireless communication device ~~connected to the firewall device and~~ configured to provide a limited management user interface for conducting a limited number of management operations of the full management system for the network security application over a wireless remote connection.
